# Infant and Early Childhood Mental Health (IECMH) Guide for Parents/Caregivers: Brain Development

#### Here is what we know about brain development:

- The brain starts developing during pregnancy and grows the most during the first 2000 days (5 to 6 years) of your child's life.
- More than 1 million new brain connections are made each second. The brain continues to develop throughout childhood and into early adulthood.
- A child's genes, their environment, early experiences, and relationships all work together to make these connections and build healthy brains.
- Some stress is a part of everyday life. Too much stress can affect a child's brain development. You can help protect them by responding in a caring and supportive way.
- Healthy nutrition, sleep and exercise are very important for good brain development, health and wellness.

# As a parent or caregiver, think about a child's age and developmental abilities, how can you:

- Building a <u>secure and trusting relationship</u>?
   It's like playing a "<u>serve and return</u>" game like tennis. For example, if your baby babbles or is upset, respond in a positive comforting way by holding them and giving them a hug or kiss.
- Respond to your child's feelings and needs?
   It is normal for children to express a wide range of emotions. It is important to comfort your child when they are hurt, sick or upset. For example, soothing your child when they fall down.
- Increase your connection to your child?
   Children learn best through real life moments. It is important to keep screen time to a minimum for you and your child. For example, the <u>Canadian Pediatric Society</u> recommends that children:
  - $\circ$   $\,$  Under 2 years old do not have any screen time.
  - $\circ$  2-5 year olds have limited screen time that is less than 1 hour a day.
  - Studies show that less is always better. There is no evidence showing that screen time improves a child's development.
- Build a support system around you?

Parenting is not always easy. Having support can help you get through challenging moments. For example, reach out to supportive family, friends, community programs and resources.

Know if your child's development is on track for their age?
 It is important to have developmentally appropriate expectations of your child's ability and behaviour.
 For example, the Looksee Checklist® (formerly Nipissing District Developmental Screen®-NDDS) and the Early Years Check-In give activities and examples for each age and stage of development.
